

SmartCraft® CONNECT

*Integrate VesselView® Functionality
with Select Multi-Function Displays*

The Mercury SmartCraft® Connect module transforms your display into an information portal for your boat by delivering VesselView® functionality on the same screen as your GPS chartplotter and sonar. The VesselView system provides more engine performance data and alerts than any other monitoring system in the marine industry. Using the convenient SmartCraft Manager mobile app, you can perform over-the-air software updates, ensuring you always have the latest tools available on the water.
